

Morfološke adaptacije medicinski i veterinarski važnih kukaca

Niko Kasalo

Diplomski studij eksperimentalne biologije, modul zoologija

Uvod

- Adaptacija – fenotipsko svojstvo koje ima određenu funkcionalnu ulogu, a evoluiralo je prirodnom selekcijom
- Morfologija tijela, krila, usnih organa, nogu i osjetilnih struktura

PHTHYRIUS PUBIS

IXODES SCAPULARIS

CIMEX LECTULARIUS

OTODECTES CYNOTIS

CULICIDAE

PEDICULUS HUMANUS

SARCOPTES SCABIEI

PARASITIFORMES

HYPODERMA BOVIS

DEMODEX FOLLICULORUM

SIMULIIDAE

NITV

Oblik tijela

Spljoštenost - prilagodba za kretanje na domadaru i skrivanje

Lateralna spljoštenost

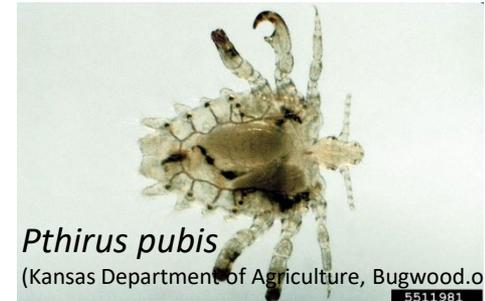

Buhe (Siphonaptera)

Dorzoventralna spljoštenost

Stjenice (Hemiptera), uši (Phthiraptera), *beaver beetles* (Coleoptera), krpelji (Acari: Ixodida)

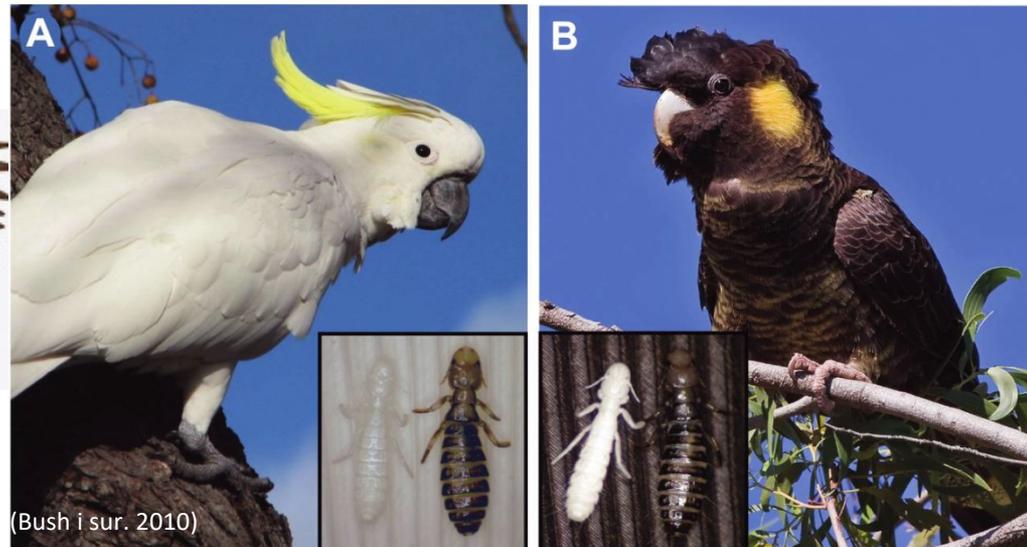

Dodatne prilagodbe

Sklerotizirane „četke“ na glavama buha

Kriptička obojenost kod uši

Moguće funkcije:

1. Lakše kretanje kroz krzno
2. Pričvršćivanje za dlake
3. Zaštita

*Neopsittaconirums
albus*

*Neopsittaconirums
borgioli*

Krila

Dobro razvijena krila

Tabanus sulcifrons
(Bruce Marlin)

Obadi (Diptera: Tabanidae) – 45 km/h

Reducirana krila

Lipoptena cervi
Ušare (Diptera: Hippoboscidae)

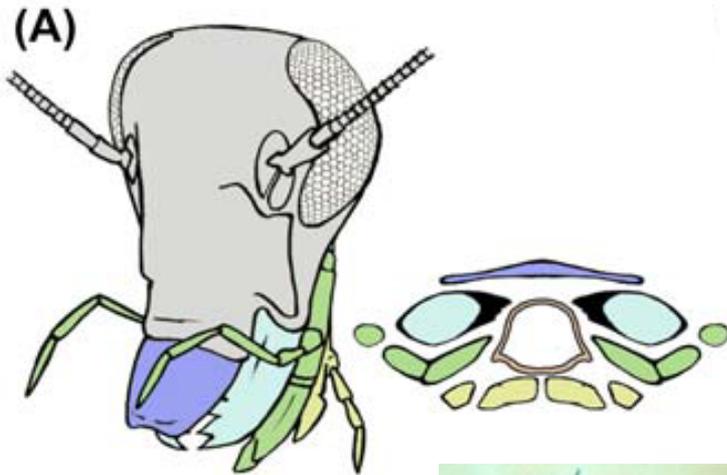

Odbacuje krila nakon što se pričvrsti za domadara

Potpuno odsutna krila

Usni organi - Insecta

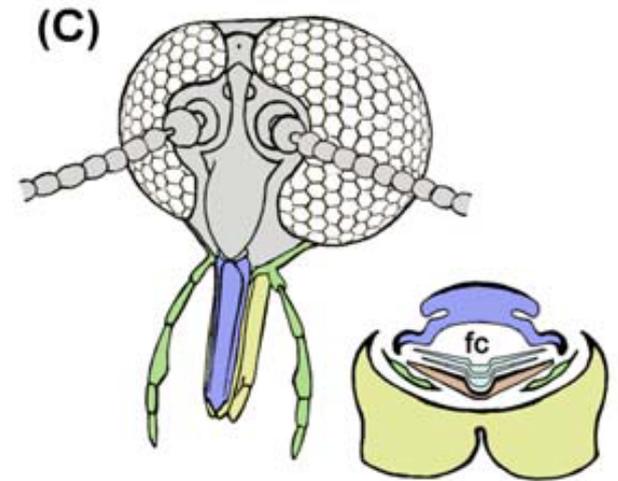

Hranjenje čvrstom hranom ili tkivima
domadara

Organi za grizenje

Žohari

Hranjenje krvlju

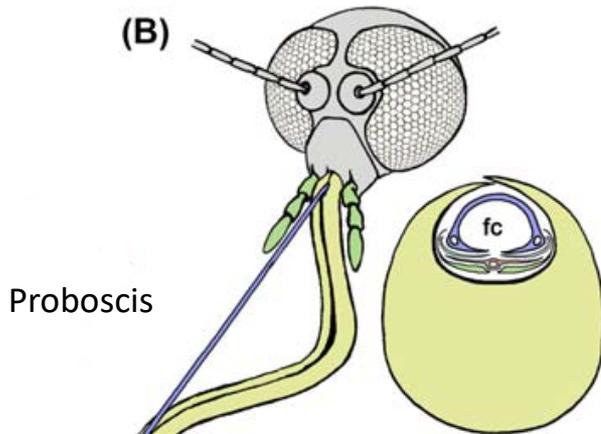

Telmofagija – hranjenje
krvlju s mjesta ugriza
Organi za grizenje i sisanje

Culicoides sonorensis
(Diptera: Ceratopogonidae)

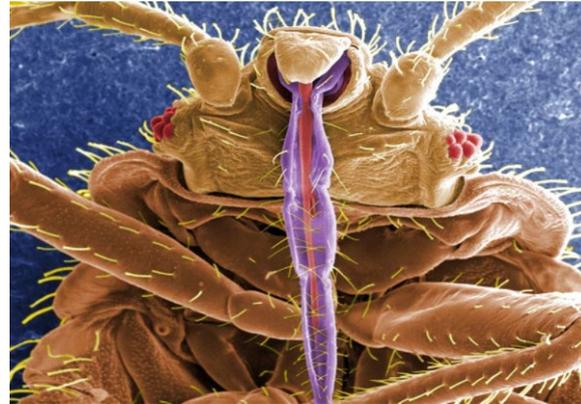

Usni organi - Insecta

Hranjenje krvlju

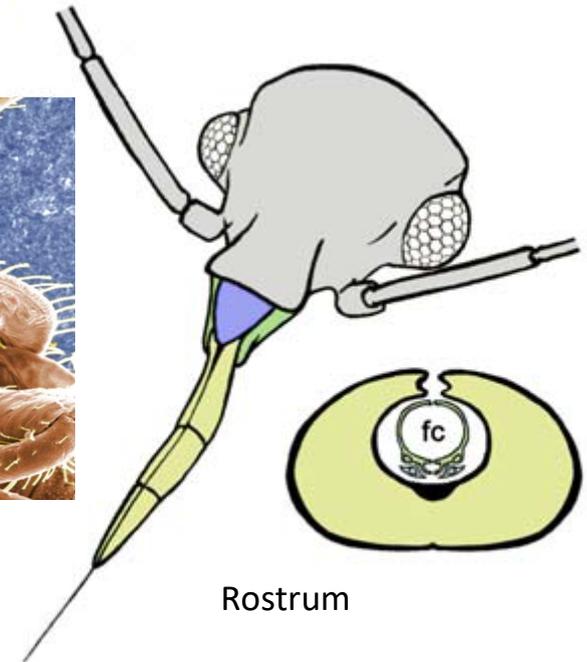

Culiseta longiareolata
(Alvesgaspar)

Hranjenje krvlju

Stjenice (Janice Haney Carr)

Solenofagija – različite strukture s istom funkcijom

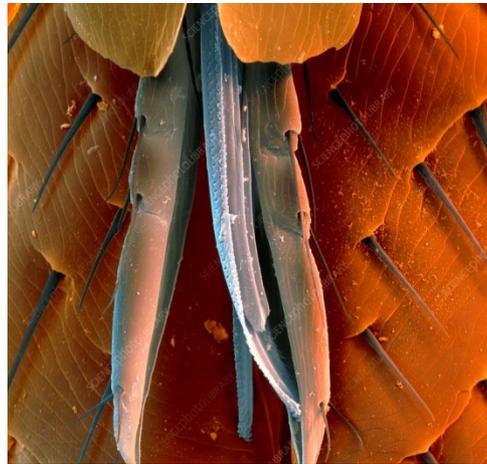

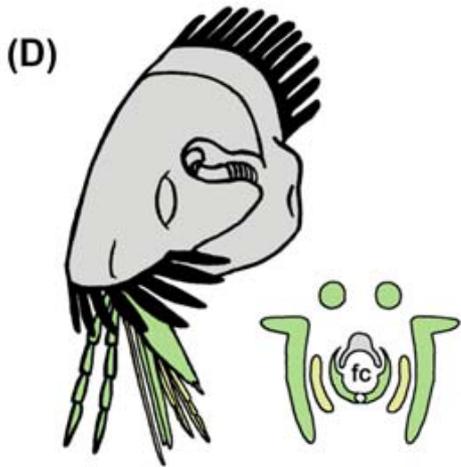

Solenofagija – direktno hranjenje krvlju

Organi za bodenje i sisanje

Labrum
 Mandible
 Maxilla
 Labium
 Hypopharynx

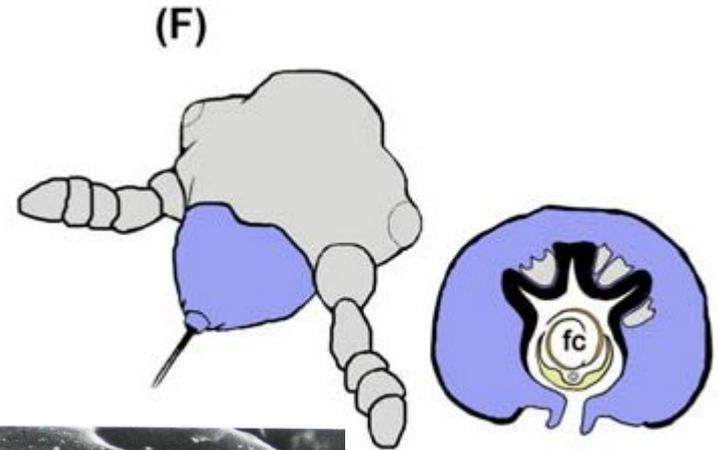

Usni organi - Insecta

Hranjenje krvlju

Buhe (Eye of Science)

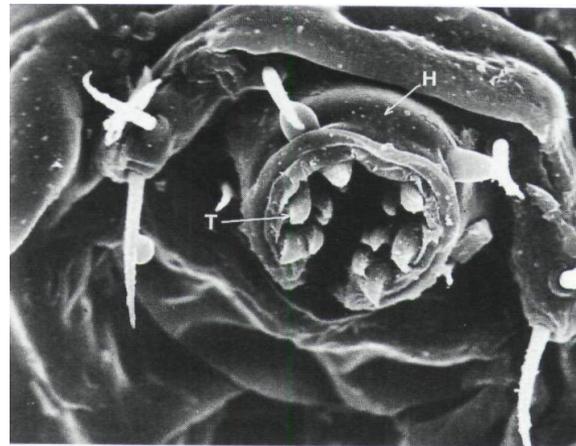

Hranjenje krvlju

Bušenje kože maksilama koje se oblikuju u cijev za hranjenje

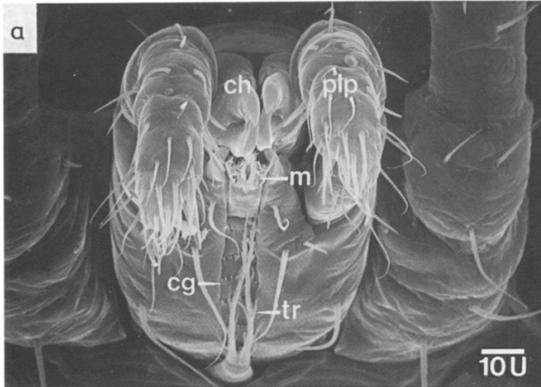

Uši

(Burns i Sims 1988)

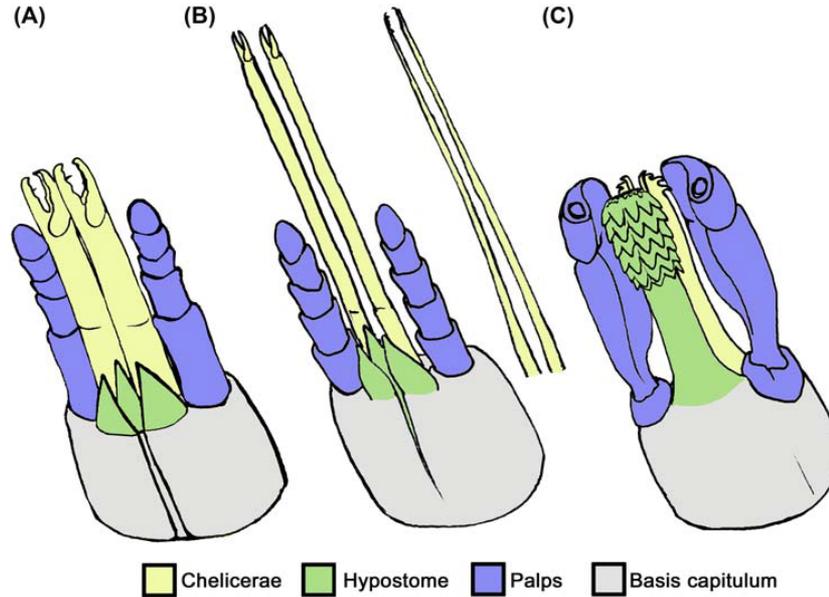

Posebna struktura – haustelum sa „zubima“ za pričvršćivanje

Usni organi - Arachnida

Pneumolaelaps (Acari: Mesostigmata) (Royce i Krantz 1989)

Amblyomma (Acari: Ixodida)

Chelicere za manipulaciju hranom – većina grinja

Ornithonyssus bacoti (Acari: Mesostigmata) (Beck i Fölster-Holst 2009)

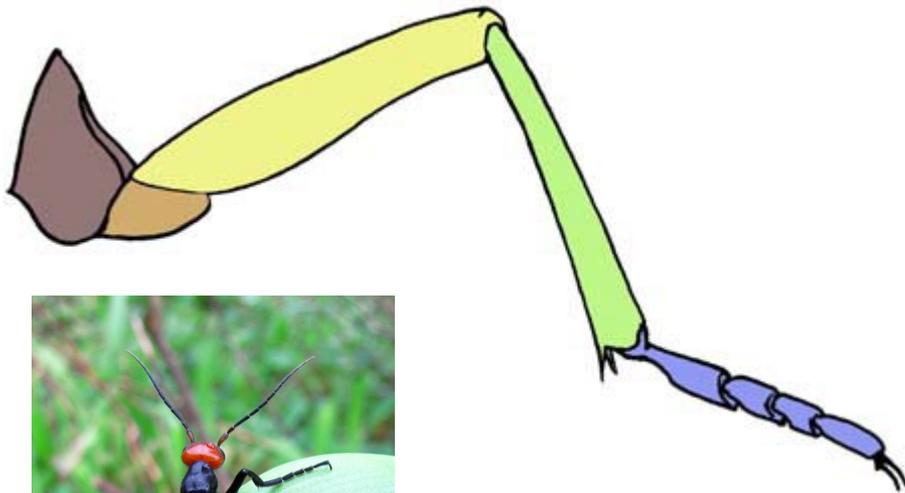

Chelicere za bušenje kože

Chelicere za bušenje kože, hipostoma za učvršćivanje pod kožom

Noge - Insecta

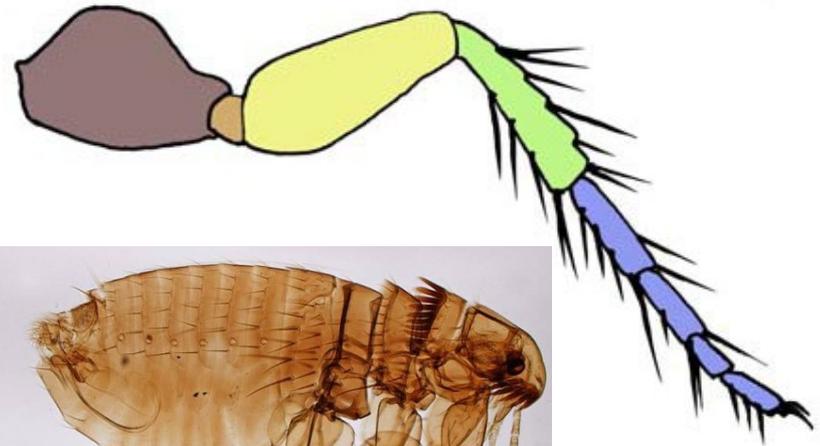

Tipična noga

Epicauta hirticornis
(Vaikoover)

Noge za skakanje

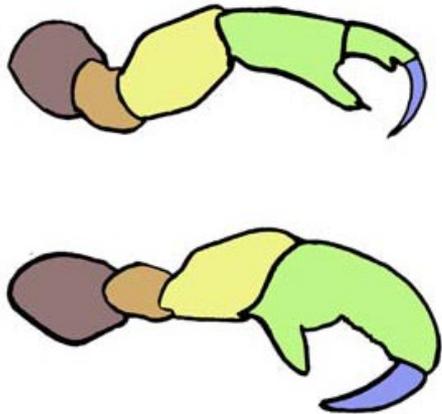

Ctenocephalides felis (Dr. Michael
W. Dryden)

Protein
rezilin

Noge - Insecta

Noge za držanje

Pediculus humanus capitis

Noge za držanje

Lipoptena cervi (Diptera: Hippoboscidae)

Phtirus pubis

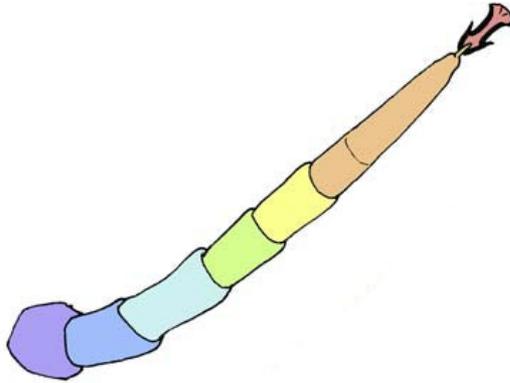

(Nicole Ottawa)

Zdepaste noge s igličastim projekcijama

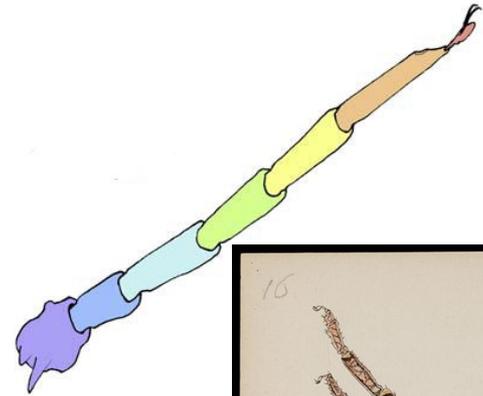

Noge - Arachnida

Tipična noga

Noge za hvatanje (1. noga)

Pneumolaelaps sp. (female, dorsal view)

Pneumolaelaps sp. (Acari: Laelapidae)

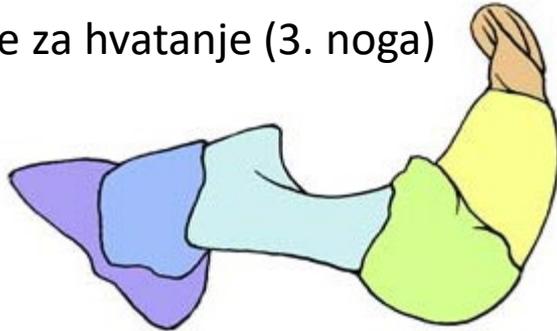

-  Coxa
-  Trochanter
-  Femur
-  Genu
-  Tibia
-  Tarsus
-  Apotele

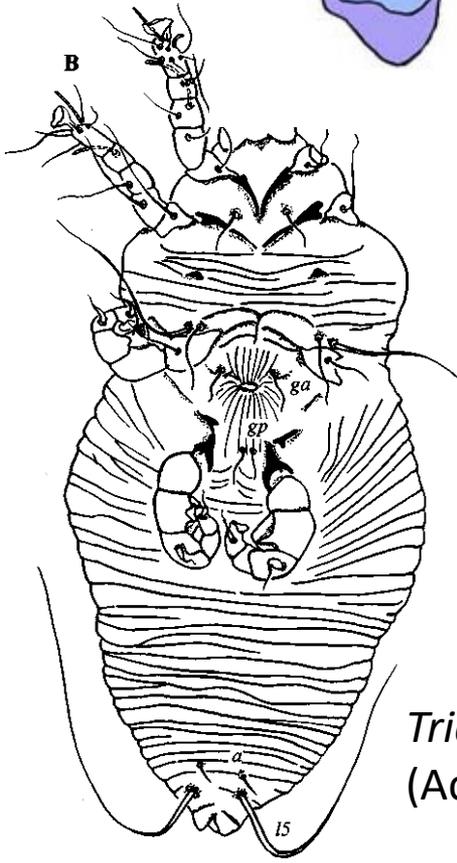

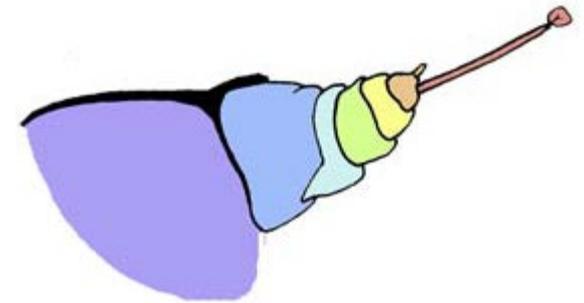

Amblyomma sp.
(Acari: Ixodidae)

Noge - Arachnida

Noge za hvatanje (3. noga)

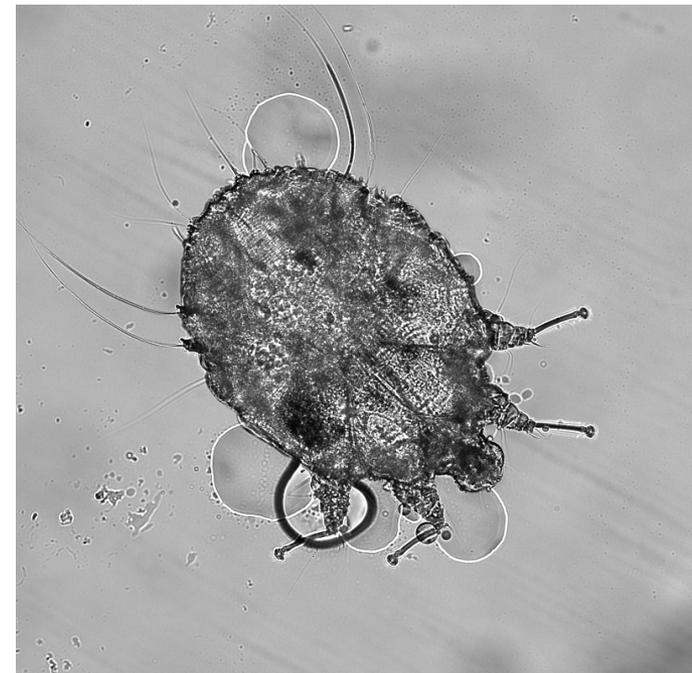

Noge za prijanjanje (1. noga)

-  Coxa
-  Trochanter
-  Femur
-  Genu
-  Tibia
-  Tarsus
-  Apotele

Trichoecius calomyisci
(Acari: Myocoptidae)

Sarcoptes scabiei
(Sarcoptiformes:
Sarcoptidae)
(Arthur Goldstein)

Osjetilne strukture

Oči

Reducirane ili odsutne

Ctenocephalides felis (Siphonaptera)

Joseph Berger, Bugwood.org

5385965

Snažno razvijene

Tabanus sulcifrons (Diptera: Tabanidae) (Bruce Marlin)

(Fedaro)

Diptera: Culicidae

Pediculus humanus capitis
(Phthiraptera)

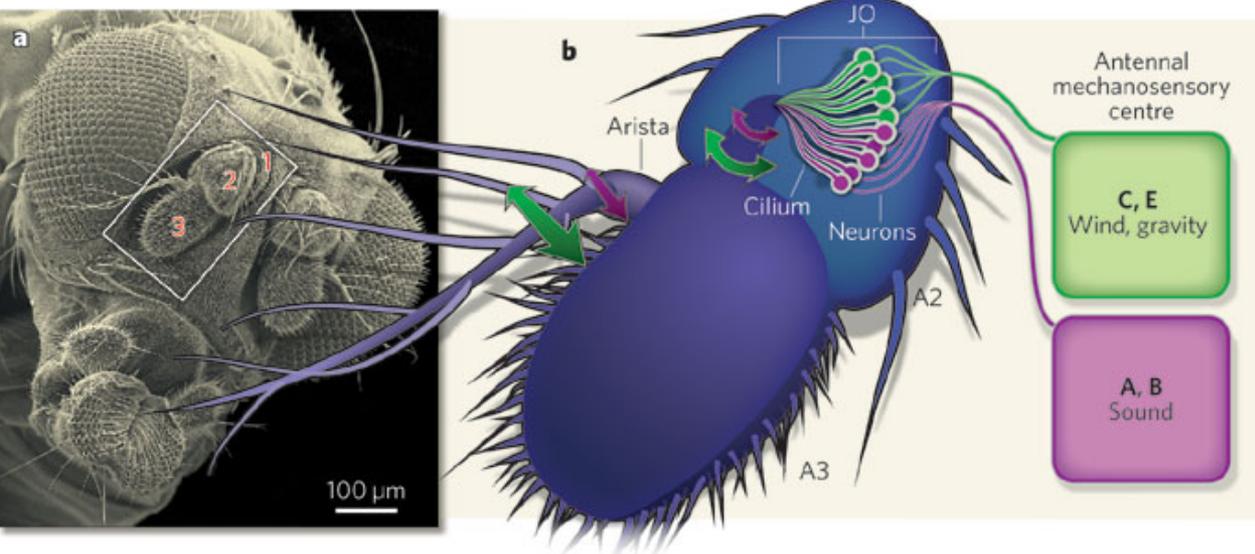

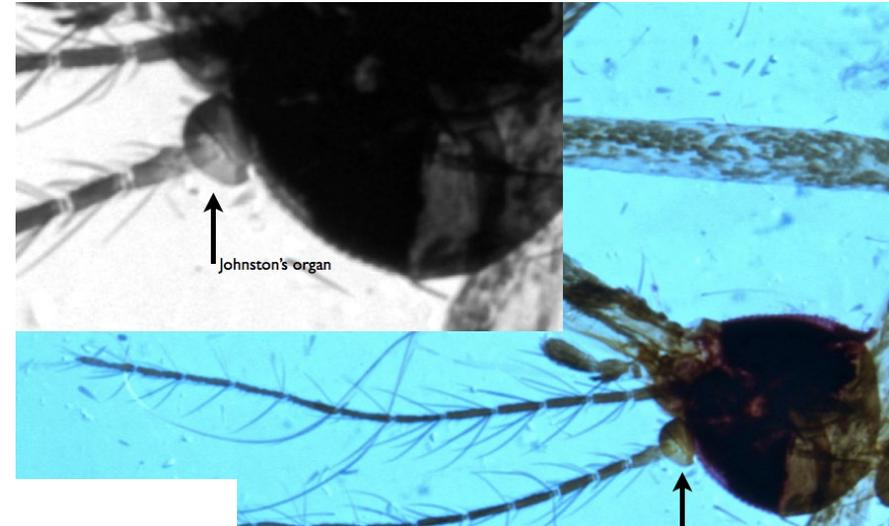

Osjetilne strukture

Johnstonov organ

Organ za detekciju vibracija (uključujući i pokrete i glasanje plijena)

Komarci

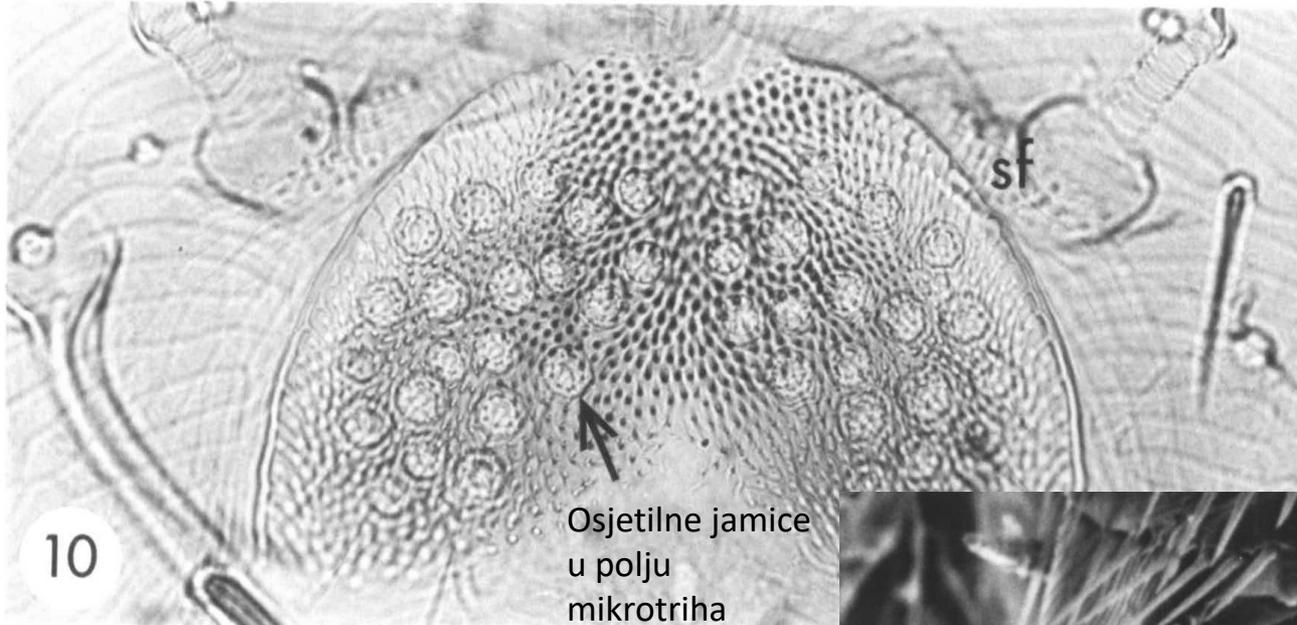

Dodatna osjetila na ticalima: CO₂, mliječna kiselina, estrogen, masne kiseline, aminokiseline

Osjetilne strukture oko usnih organa – dobro razvijene kod medicinski važnih kukaca

Osjetilne strukture

Sensilium - buhe

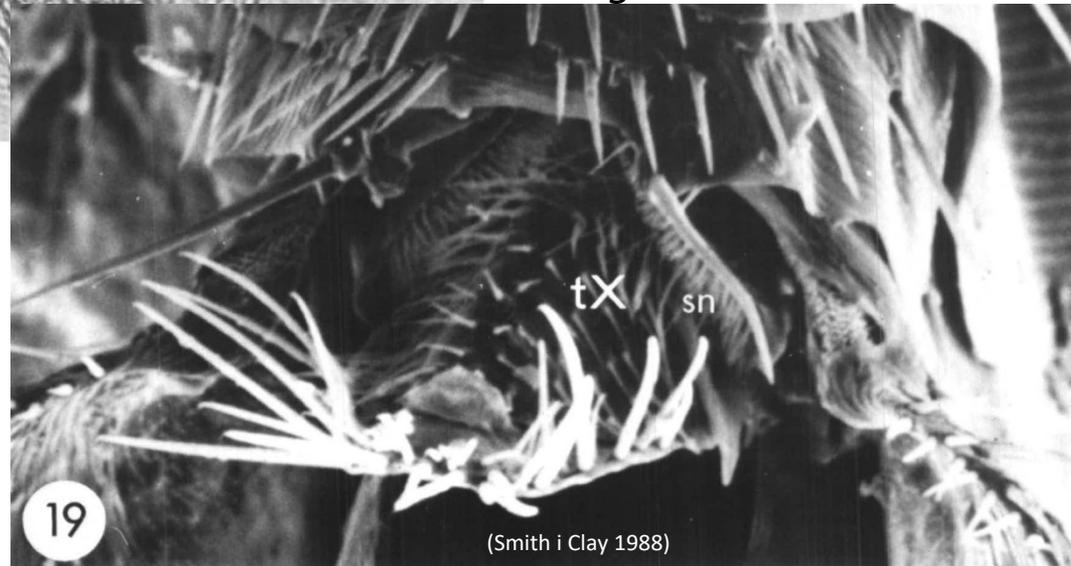

Osjetilne jamice
u polju
mikrotriha

Sensilium ženke
Myodopsylla insignis
(Siphonaptera:
Ischnopsyllidae)

Sensilium mužjaka *M.*
insignis

Pronalaženje plijena pomoću vibracija i
temperaturnih gradijenata,
poravnavanje genitalije tijekom
kopulacije

Varijabilna struktura, dorzalni dio
terminalnih abdominalnih segmenata

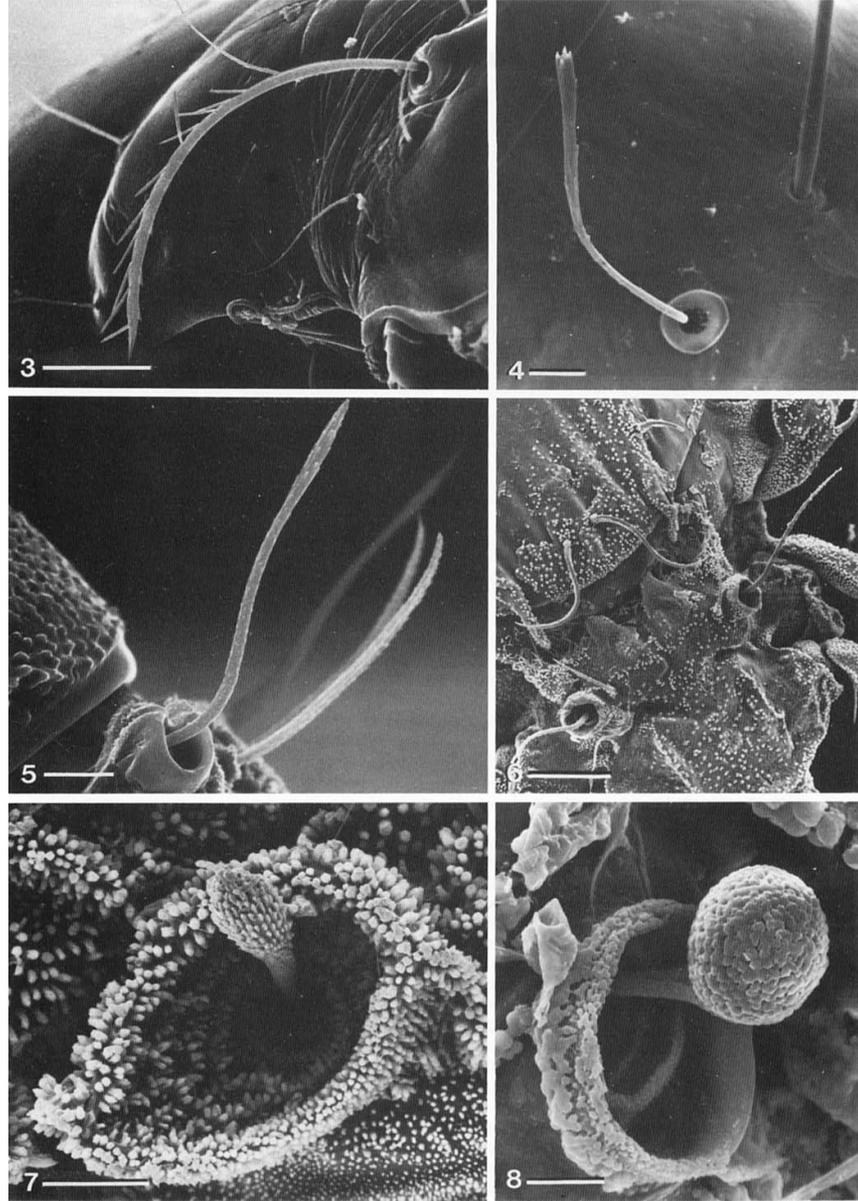

(Smith i Clay 1988)

Osjetilne strukture

Trihobotriji

Plake za detekciju vibracija

Arachnida: Acari, ali prisutne
i kod brojnih drugih skupina
Arachnida

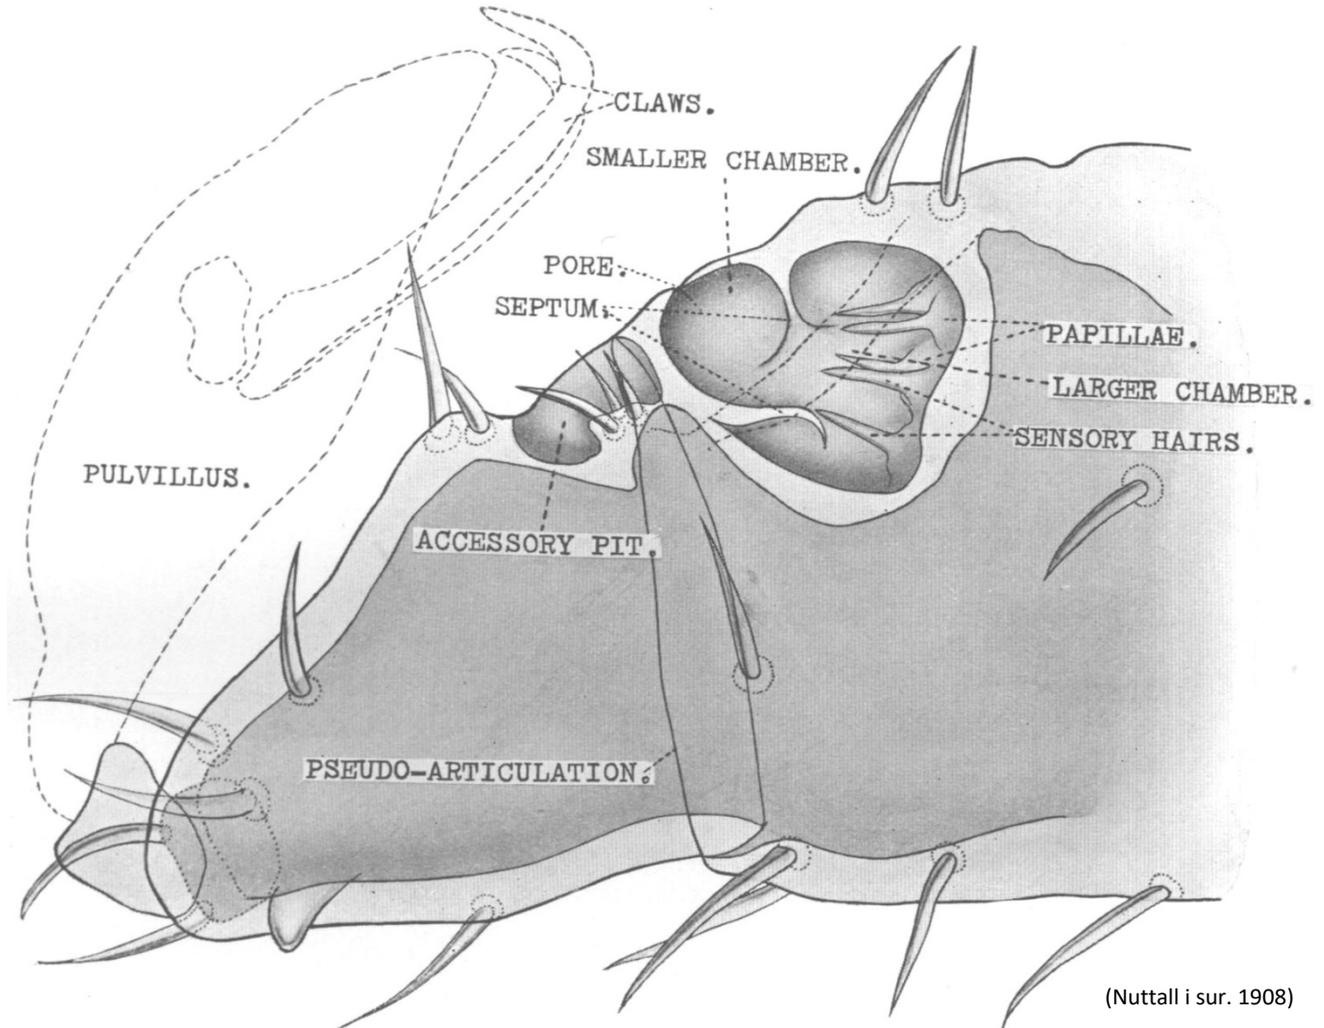

Osjetilne strukture

Hallerov organ

Arachnida: Ixodida

Struktura na
dorzalnim
dijelovima tarzusa
prvih nogu

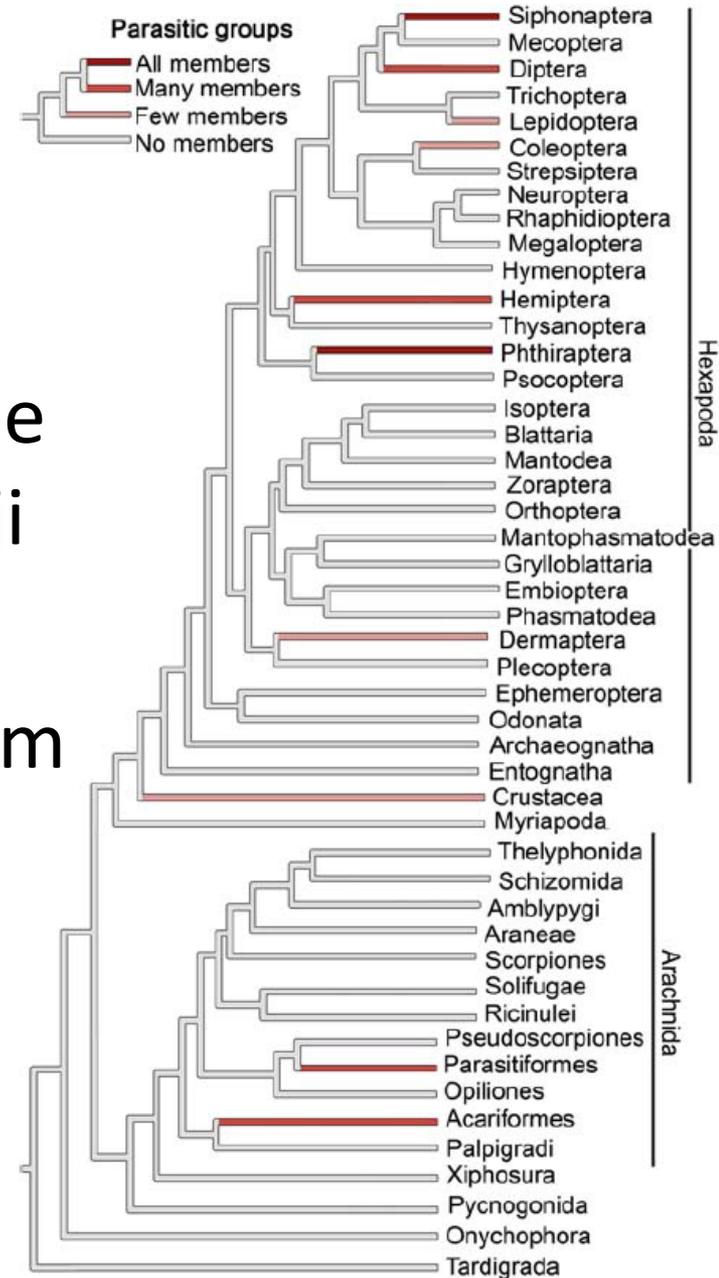

Detekcija
temperature,
strujanja zraka i
mirisa domadara

(Nuttall i sur. 1908)

Zaključak

- Adaptacije koje omogućuju parazitski način života pojavile su se nekoliko puta u evoluciji kukaca
- Brojne strukture sa specifičnim funkcijama
- Konvergentna evolucija
